

# FRONT SHOCK ABSORBER CONSTRUCTION

---

B3E021334700T01

- Excellent response shock absorbers with large-diameter (**35 mm {1.4 in}**) pistons have been adopted.
- Separated input type front shock absorber mounts have been adopted. Due to this, the shock absorbers characteristic function efficiently, improving handling and riding comfort.
- The coil springs are positioned to provide reduced friction when lateral force acts on the front shock absorbers.
