

MASTER CYLINDER CONSTRUCTION

B3E041143400T01

- With the adoption of the master cylinder having an enlarged diameter (**25.4 mm {1.00 in}**), brake pedal operability has been improved.
- For vehicles with DSC, the diameter of the pipe between the master cylinder and the DSC HU/CM has been increased, improving response during DSC operation.
- Except for the reserve tank, the master cylinder cannot be disassembled. Therefore, if there is any malfunction in the interior of the master cylinder, replace the cylinder component without disassembling.
