

ON-BOARD DIAGNOSTIC FUNCTION OUTLINE

B3E070261190T01

Features

- The on-board diagnostic function consists of a malfunction detection function that detects malfunctions in input/output signals, a memory function that stores detected malfunctions, a fail-safe function that prevents an operating malfunction of output parts where a malfunction is detected, and a malfunction display function that displays detected malfunctions.
- The malfunction display function is accessed by connecting the WDS or equivalent to the DLC-2.
