

CAN (CONTROLLER AREA NETWORK) OUTLINE

B3E074061190T02

- The climate control unit sends and receives data to and from other modules via the CAN system. Refer to Section 09-40 for a detailed explanation of the CAN.

Data sent/received

Data sent

- A/C operation status
- A/C operation status display
- Rear window defroster operation
- Ambient temperature display
- Operation sound for climate control unit switch
- Malfunction diagnosis output

Data received

- Ambient temperature
- Engine coolant temperature
- Vehicle speed signal
- Gasoline/diesel vehicle determination
- Temperature display (°C/°F) determination
- Malfunction diagnosis input
- Wiper status
- R/DEF IND. signal
