

FUEL GAUGE CONTROL CONSTRUCTION/OPERATION

B3E092255430T16

System Wiring Diagram

1	Instrument cluster
2	Microcomputer
3	Fuel gauge
4	Fuel gauge sender unit

Operation

- A resistance according to fuel level is sent from the fuel gauge sender unit to the microcomputer. The microcomputer calculates the average resistance within a specified time, and sends the output signal to the fuel gauge based on the calculated value.
